Project Details

Title of the Project:

An AI-Powered Crop Disease Detection and Agrochemical Recommendation Framework

Abstract:

Crop diseases significantly affect agricultural productivity and can cause major economic losses for farmers. Traditional disease identification often depends on manual inspection, which can be time-consuming and may require expert knowledge. This project proposes an AI-Powered Crop Disease Detection and Agrochemical Recommendation Framework that uses artificial intelligence and computer vision to support early and accurate disease identification. Farmers can provide a leaf image through the system, which is analyzed using a deep learning-based vision model to classify the crop disease. Based on the identified disease, the system provides a suitable agrochemical treatment recommendation, helping farmers select an appropriate treatment. The framework is designed to provide a simple and accessible interface through a mobile or web application. By combining automated disease detection with treatment recommendation, the proposed system aims to reduce manual effort, support timely decision-making, and help minimize crop losses. The overall framework provides a practical AI-based approach for improving crop health management and supporting farmers in making informed agricultural decisions.

Weekly Meeting Record

Week No: _____

Date: _____ to _____

Capstone Project Title: _____

Group Members:

1. Name: _____ Reg. No. _____ ☐ Present

2. Name: _____ Reg. No. _____ ☐ Present

3. Name: _____ Reg. No. _____ ☐ Present

4. Name: _____ Reg. No. _____ ☐ Present

Meeting Venue: _____ ☐ On Time

Documents Submitted:
